Conducting Polymers Special Applications - [PDF] [EPUB] *Conducting Polymers Special Applications* Conductive polymers or, more precisely, intrinsically conducting polymers (ICPs) are organic polymers that conduct electricity. Such compounds may have metallic conductivity or can be semiconductors. The biggest advantage of conductive polymers is their processability, mainly by dispersion. Conductive polymers are generally not thermoplastics, i.e., they are not thermoformable. - Tue, 16 Apr 2019 10:34:00 GMT Transparent conducting film - Wikipedia Bal Seal® spring-energized seal Solutions for Reciprocating ... Anthracene-containing polymers toward high-end applications Anthracene (c1ccc2ccccc2c1), consisting of three aromatic rings, makes up a few percentages of coal tar. The separation of anthracene from coal tar is the most economical production route. Anthracene is mostly used after oxidation to anthraquinone as a dye precursor [2,3]. (Un)substituted anthracenes have so far been used as MALDI matrices [4,5], scintillators [6,7], electroluminescent devices [8,9] and ... It has become of great interest not only as an underutilized resource, but also as a new functional material of high potential in various fields, and recent progress in chitin chemistry is quite noteworthy.
